

NexusWork File MIME & Functionality Reference

Generated September 2026 · Source of truth: apps/backend/src/modules/files/files.upload.js and the frontend file upload components.

Executive summary

Every file upload is checked twice: first by MIME type plus filename extension, then by the file's binary signature or valid UTF-8 text content. A file is accepted only when both checks pass. The backend default upload limit is 20 MB (MAX_FILE_SIZE_MB can change this in deployment). Files are private and are served only after authentication and resource-authorization checks.
